ABOUT SPECAST

Founded in **1975** and known as the **first artificial stone factory in the UAE**, Specast grew to become a **leading factory in special building materials**. Over the course of 45 years, Specast is proud to have some of the country's greatest landmarks under its name, along with their experience under its belt.

Specast, with a widely established reputation of quality throughout its works, and several official exhibitions in the UAE and other foreign countries, is proud to have been awarded:

"The Arch of Europe Gold Star for International Quality" in 1992 – Madrid, Spain.

"The International Platinum Star for Quality Award" in 2000 – Geneva, Switzerland.

These trophies are the crowning of Specast's contribution in the field of construction during the early stages. Throughout our creation and production of high-quality building and cladding materials, **Specast has participated in a vast number of projects among which the most prestigious in the country leaving the distinctive Specast touch of quality and elegance on every project.**

Specast has the ability to meet any design requirement with an unlimited number of designs, as well as its capacity to immediately be available to work closely and meet our clients schedule and expectations.

GRC, Glass-fibre Reinforced Concrete

DRS, Decorative Reconstituted Stone

Artificial Stone Cladding

MATERIALS

GRC

Referred to as either GRC or Glass-fibre Reinforced Concrete (GFRC), the material comprises high-strength, alkali-resistant glass fibres which are embedded into a concrete matrix. These fibres act as the main load-carrying component, while the surrounding matrix keeps them in position, and transfers load between the fibres. Both fibres and matrix are good at retaining their physical and chemical identities, combining these properties to create a high-performance composite.

GRC is usually manufactured in thin sections, by machine-spraying an enriched grade of cement and aggregate mix with glass fibres dispersed throughout. These fibres serve a similar purpose to steel rebar in reinforced concrete. The big difference being that fibres do not rust.

Key Benefits of GRC

GRC panels are typically used to create a lightweight cladding system and can be made to look almost identical to natural stone or even wood. Installation is easier and more cost-effective due to the lower weight of the panels, which is 75-80% lighter than pre-cast steel reinforced concrete cladding.

Given the growing importance of sustainability within housing, this point is becoming more important. Tests show that GRC is now being seen as an energy efficient building material.

ANY DESIGN – ANY SIZE – REPLICATE COMPLEX PROFILES – LONG LASTING

M A T E R I A L S

DRS

Decorative Reconstituted Stone is a highly refined building material manufactured from a mixture of portland cement, coarse aggregates and fine aggregates to simulate natural cut stone. Cast stone can be used to make, among other things, arches, mantels, hearths and columns. Our DRS is precast and comes to your site ready for installation.

Since concrete is so versatile, design options are nearly endless. Stains, colored aggregates and special molds can help homebuilders and homeowners achieve numerous colors; among a wide range of designs that are also customizable.

MATERIALS

ARTIFICIAL STONE CLADDING

Artificial Stone cladding is a refined or thin layer of artificial stone, which is applied to an exterior or interior wall, to give the effect that it is made entirely of natural stone.

Benefits of Stone Cladding

Appearance

Stone cladding will dramatically change the look and feel of any wall, pillar, column or surface it is applied to. Its elegance speaks for itself when you see the stunning appearance it portrays.

Since stone is so unique it can either go down the road of no two colours are the same to being a complete block colour.

Artificial Stone gives off such an exceptional look, you can have the option of so many colours and textures that it will completely transform the area you're using it for.

Durability

When used on an exterior wall, stone cladding is robust and can withstand the effects from all forms of nature. Come rain or wind, your stone cladding is there to stay. It's even fire resistant, which is a great added benefit.

Versatility

Because of its robust nature, you can literally use stone cladding anywhere. Whether this is for a fireplace, outside exterior or even a bathroom, stone cladding has got you covered. If you've got a vivid imagination, you can have your stone designed to fit any area in and out of your home. It can be made to fit around your needs, with a spectacular finishing effect.

KEO'S REMARKS :

Accepted as noted, Project Specifications and Drawings to be strictly followed.

Corrections or comments made relative to submittals during this review does not relieve the contractor from compliance with the requirements of his Contract, drawings and specifications. This review is only in respect of general conformance with the design intent of the project and general compliance with the information given in the Contract documents. The contractor remains responsible, among other things, for the design of the project or such parts of the project he has design responsibility for (if design forms part of the Contract), for confirming and correlating all quantities and dimensions, selecting fabrication processes and techniques of construction, coordinating his work with that of other trades, and performing his work in a safe and satisfactory manner, all in accordance with the Contract.

Greetings,

Subject: CATALOGUES AND TESTS REPORTS
FROM GOVERNMENT LABORATORY FOR
BUILDING PRODUCTS

We thank you for your letter dated 19th March, 1979 enclosing the Lab. report on the facing brick and information on other building materials such as Claustra, artificial stone etc. We have studied your products and specifications and found them interesting. We would like to make use of these materials as and when we find them appropriate, for our future projects.

Meanwhile we would request you to keep us informed of any new products and change of specifications / availability of your products.

Regards.

QA / QC POLICY

Specast – Glass Reinforced Concrete

Quality Policy

Specast Building Materials understands the importance of Governance for the successful delivery of all materials produced in our factory.

Specast is committed to quality control and assurance to insure the best performance of supplied materials and services. We are always aiming to provide the client with the best quality of materials in the market.

Specast's policy is a declaration of our commitment to deliver a safe environment while ensuring quality and performance across all activities taking place in our factories and on our construction sites while complying with legislative, regulatory, contractual and other Key Performance Indicators (KPI). This is always followed to meet our clients' expectations.

Objectives:

- Consistent manufacturing of materials throughout the entire project duration
- To use the highest quality of materials while producing GRC
- Consistent tests if required to ensure all specifications are met
- To promote the use of innovative ideas to reach solutions and methods
- Regularly review and evaluate our performance
- Pursue excellence by using preventative management

To insure that the above-mentioned objectives are met Specast has designated QA/QC personnel in the factory to enforce all quality standards and report any issues that could arise during the manufacturing/project period. The QA/QC Personnel report directly to the General Manager of Specast to keep management updated and aware of any improvement that is possible.

Specast holds itself, its employees, and any subcontractors working under their contract to the highest level of standards and quality. The management
